

## Product system for temporary protection

*Adhetec provides you the best adapted product for each application you can think of, by matching your desires with the highest quality standards.*

*In order to guarantee the durability of your products up to their delivery, ADHETEC offers protection perfectly adapted to your surfaces.*

- *Adhetec solutions provide protection for surfaces at all stages of the manufacturing and maintenance cycles: from production to delivery and storage.*

*The products are designed to cover all types of surfaces without any risk of damage.*

- *Protection against dust, scratches, tool falling, oil and solvent.*
- *Protection for a broad range of surface finishing: Polished Metal, Aluminium, Composites, Coating Metal, Flooring, Wood, Textile, Lacquered parts...*

- *Easy to apply: Our product know-how enables us to offer you efficient solutions:*

- *Enhanced productivity,*
- *Cost-saving and quality improvements*

- *These solutions aim to offer higher conformity quality levels while nurturing the brand image of your company.*

From the first stages of manufacturing, our solutions provide protection for rough, polished and pre-treated surfaces against shocks, scratches, oils and solvents. They are easy to integrate into the process and often have anti-skid qualities enabling employees to work with utmost safety.

High thickness protective solutions are delivered as kits according to the customer's specifications. Products can be implemented quickly and used for several manufacturing cycles.

Our protective films and foams are suited to a wide variety of surfaces including galley, luggage racks, shelves, seats, textiles, carpets, etc.

# ▶▶ A range of solutions to match your exact needs

A modular system defined according to the need for protection (scratches, dust, light shocks, tools dropped, moving of equipment, etc.) with an adhesive system suited to the surface.

	Code	Product	Application	Thickness
Primary part protection	RE/07-06/694	Temporary protection during manufacturing against shocks, oil and solvents. Protection for primary parts in machining phase: Triple layer: Absorbent film, shock absorber system, solvent proof barrier, removable acrylic adhesive.	Thick protective system for primary parts during machining phases. The product comes in rolls: Easy to implement – The system is removed effortlessly, the adhesive leaves no residue – The product can be walked on – The system is perfectly solventtight against runoffs and infiltrations.	3 mm
	RE/05-06/663	Temporary protection for specific surfaces such as: Polished metal, Composites, Aluminium, etc. Thick reinforced paper, removable rubber adhesive.	Thick paper with a temporary adhesive, product in rolls: Easy to implement – Immediate adhesion on many surfaces – Repositionable – Easy to remove, leaves no residue.	0.41 mm
	527	Temporary protection for smooth and lacquered surfaces. Thick fabric, removable rubber adhesive.	Extremely conformable protective fabric, Easy to implement, Adherence to many surfaces without risk of glue residue. Adhesion by pressure.	0.25 mm
Assembly phase protection	T415/A/P5	Temporary protection against shocks – For very fragile surfaces such as carbon panels: Thick treated anti-skid and anti-slip polypropylene film. Adhesive free, held by contact.	Semi-rigid panel cut into shape: The product is delivered cut into shape: available as a kit, easy to implement – The system stays in place thanks to anti-skid treatment, no risk of altering the surface – No glue residue – Translucid product – Can be used in several manufacturing cycles.	1.2 mm
	T409/A/P1	Temporary protection against shocks – For very fragile surfaces – Cushion obtained from a layer of polycarbonate and foam. Adhesive free, held by contact.	Semi-rigid panel cut into shape: The product is delivered cut into shape: available as a kit, easy to implement – The system is held in place by contact, no risk of altering the surface – No glue residue – Can be used in several manufacturing cycles and even in test phase.	4.5mm
	RE 06 06/676	Temporary protection against shocks – For smooth and fragile surfaces. Embossed anti-skid PE film. Removable acrylic adhesive.	Thick PE film: Product in rolls, anti-skid, particularly suitable for fragile surfaces. Can be walked on.	0.2 mm
Final phase protection	305	Temporary protection in assembly phase – PE foam film. Removable acrylic adhesive.	Thick foam, in rolls, its versatile adhesive protects a wide range of surface finishes: From grained to smooth. (Galley, luggage compartments, etc.)	3 mm
	409 & 455	Temporary protection for textiles and carpets – PE film, removable acrylic adhesive.	PE film, Ideal product to protect textile and/or highly textured surfaces. Well-adapted for textile surfaces, such as acrylic fibres, polypropylene, polyamide, polyester-based carpets.	0.1 mm (100 µm)
	445	Temporary protection against dust and scratches for smooth surfaces – PE film, Removable acrylic adhesive.	PE film, low level of adhesiveness for fragile surfaces such as PMMA, lacquered woods, painted parts.	0.05 mm (50 µm)
	423 & 406	Temporary protection against dust and scratches on outdoor lacquered surfaces – PE film, Removable rubber adhesive.	PE film, for lacquered surfaces – resists to outdoor conditions.	0.08 mm (80 µm)
